

## MAKES WHEEL CHANGES QUICKLY, SAFELY AND EFFORTLESSLY

- leave the heavy work to your forklift

# STARCO GS

With the two pick-up rollers you grasp the wheel on the rim shoulders. Thanks to the rubber tires, the wheel can not slip from the rollers. By tilt of the beam, the wheel is placed parallel to the axle.

To place the wheel, drive your forklift in front of the tractor axle while the wheel stays safely secured by the safety belt. All this you control comfortably from the seat of your forklift and safely by truck seat.

Thanks to the rolling bearing support rollers which run in the bead seat, even heavy wheels can be easily rotated by hand.

The parking brake, keeps the wheel assembly in the exact fitting position. So the holes will fit over the bolts.

While driving the safety belt holds the wheel reliable. It is tensioned by the 2-ratchet.

## GO SAFE AND FAST

The Speedy Changer weighs cpl for forks only 81.6 Kg.

- ① pick-up rollers
- ② supporting rollers
- ③ chassis
- ④ safety belt
- ⑤ tension ratchet
- ⑥ safety chain with hook

In no time, the supporting rollers are adjusted to the rim diameter.
